nursing care for cancer patients—

...a major concern of families *and* physicians. In a unique pioneering service, we are seeking to develop a solution.

Recognizing the phenomenal growth of nursing homes, aware of the shortage of nurses and the implications of extended care benefits of Medicare, we have launched a dramatic demonstration project on cancer nursing for nursing home staff. Emphasis is on colostomy irrigation, care of the laryngectomized patient, care of an ileal bladder, and emergency nursing. For maximum application of this plan, nurses are being trained by the Society to conduct such courses in nursing homes throughout the nation.

This endeavor has been endorsed by the American Nurses Association and other professional organizations. We feel sure that such a program, bringing skilled nursing care to the cancer patient, will be welcomed by the medical profession.

PATIENT CARE

Incontinence in children and in adults

Two articles deal with the young and old aspects of this troublesome complaint. In the first, you will find help in answering that familiar question: "When will my child stop wetting the bed?" Tips on diagnosis and current theories on treatment are reviewed by urologists, pediatricians and a child psychologist. The second article suggests approaches to the differential diagnosis and treatment of stress incontinence and urge incontinence in the adult patient.

Dealing with teenage sexual problems

Caught between the rising tide of illegitimate teenage pregnancy and the moral dilemmas involved in the use of the pill, the family physician may have to take a hard new look at his own attitudes and practices. In this feature article, a group of specialists in adolescent medicine offer some challenging concepts that may provide you with alternatives as well as stimulate your thinking.

Watch for these and other features in the January issue
